COVID 19 Update - October 15, 2021

The word outbreak has perhaps an alarming connotation. However, the reality is that an outbreak is declared by Public Health when just 1 (one) or more residents or staff test positive for COVID-19. The outbreak status continues for 28 days if a resident tests positive or 14 days if a staff tests positive. Every time a new case presents, the status calendar is reset.

There is one current active case in Supportive Living. As of today's date, we are looking at November 10 as the last date of the officially declared outbreak...providing no new cases develop.

Our outbreak has had 2 main 'peaks'. Approximately 2 weeks following the first peak, prevalence testing was offered to all our residents and all the results were negative. Following the second peak, all the residents in Assisted Living were swabbed and again, all the residents were negative.

Residents in Supportive and Assisted Living were offered a 3rd dose of vaccine on Sept 23 with a great uptake. All staff are required to be fully vaccinated by October 31, 2021 and Chinook Village continues to strictly adhere to Public Health protocols.

Thank-you to all residents, families, and staff for their continued adherence to Public Health protocols.
